INDEX OF THE TROELSTRA ARCHIVE

Introduction

This index was mainly prepared in 2000 and 2001.[1] The archive itself was stored at the Mathematical Institute of the University of Amsterdam, afterwards (2001) brought to the Rijksarchief in Noord-Holland. The length of the archive is circa 2.5 meters. The material in the archive has been divided into a number of major categories, distinguished by capitals in the numbering of items, e.g. B (scientific correspondence), C (courses given by Troelstra, seminars and colloquia conducted by him), P (all materials relating to his publications) etc. Usually these major categories are again subdivided. The description of the contents is not carried out with the same amount of detail for each (sub-) category. A lot of material in this index was already set up by A.S. Troelstra himself (especially publications, lectures and congresses).

[1] The way Troelstra set up the Heyting Archive (now part of the Rijksarchief Noord-Holland in Haarlem) and its index was a model for this archive and index. The Library of the Faculty of Sciences (Faculteit Natuurwetenschappen, Wiskunde en Informatica) of the University of Amsterdam, and especially the chief librarian H. Harmsen, gave me the opportunity to complete this index.

INDEX OF THE TROELSTRA ARCHIVE

Division of the material into main categories
Main divisions are indicated by the first (capital) letter of the number of the items. The letters have been chosen because of some mnemonic association with a Dutch word. The main divisions are characterized in the list below.[3] The groups C, D1, P and V give mainly an overview of Troelstra's activities in these sections. Not every item of them is really filled with records.

B. [Brieven] Scientific correspondence.
C. [Colleges] Notes of courses given by Troelstra, notes and announcements of Seminars and Colloquia conducted by Troelstra, lists of participants etc.
D. [Diversen] Miscellaneous: congresses attended by Troelstra and administration related to the University of Amsterdam.
G. [Genootschappen] Material connected with Troelstra's organizational activities, membership of societies etc.
P. [Publicaties] Material connected with Troelstra's publications: drafts, preprints, correspondence relevant to the history of the publication, data on the congresses where the lecture was given which resulted in the publication etc.
R. [Redactie-werk] Editorial work. Correspondence relating Troelstra's work as an editor of the series of monographs 'Studies in Logic and the Foundations of Mathematic', The Journal of Symbolic Logic, etc.
S. [Scripties] Correspondence and documents concerning scripties (= M.Sc. theses) and promoties (= Ph.D theses) prepared under Troelstra's guidance, or in the preparation of which he has been involved.
V. [Voordrachten] Material concerning (un)published lectures and manuscripts of Troelstra.

Abbreviations
Cc., cc. = carboncopy; Ms., ms., mss. = manuscript(s); Pc., pc. = photocopy; sh. = sheet(s): Ts., ts., tss = typescript(s).
X (> Y, Y >, Z > Y) = amid the correspondence between Troelstra and X: there are also letters from X to Y, from Y to X, from Z to Y (>< Y = letters from X to Y and from Y to X, etc.). Sometimes, the correspondence between Troelstra and X in such a bigger combination, with X, Y, Z, etc. is empty. Additions follow always under the 'key'word. The additons of names are alphabetically (it gives an indication and this is not always the way they are really ordered in the archive under such an entry; the user has to search for that himself, especially in the Kreisel correspondence).

B. Brieven [Scientific correspondence]
The correspondence is chronologically ordered (decades: 1960 – 1970, 1970 – 1980, 1980 –

---

[3] Till 2026 it is not possible to inspect the following items without the permission of A.S. Troelstra: B, D2, D3, D4, G4, G5, G6, R3, R4, R5, R6, R7, S2.

1990, 1990 – 2000), then alphabetically by correspondent (and then for each correspondent again chronologically). Anderson, J.G. means: there is correspondence between J.G. Anderson and A.S. Troelstra. The correspondence between A.S. Troelstra and G. Kreisel is exceptional, therefore also the treatment (the red coloured corrections in some letters are Kreisel's; signatures with GK means G. Kreisel). Sometimes we name Troelstra in the correspondence only 'T', of course the signature 'AST' or 'Anne' means A.S. Troelstra.

Besides Kreisel there is an other remarkable phenomenon in this correspondence: the birth of the electronic mail. There is always a group of e-mails, difficult to order, therefore exists under B a special group after the period 1990–2000 with the name 'e-mails, miscellaneous'; they are ordered as follows: '1990 – 2000, e-mail, miscellaneous', then chronologically ((combinations of) months), and within such a group alphabetically. And again: it gives an indication under an entry and this is not always the way the names are ordered in the archive itself; the user has to search for that further on.

For manuscripts not associated with correspondence, but which have been annotated by Troelstra, see under group S and under R.

Period 1960 – 1969.

P. Publicaties [Publications]

In the file for each publication we have brought together all material connected with the publication; but see also group D1 for information on the congress where the lecture was delivered which resulted in the paper in the congress proceedings, correspondence concerning the invitation, etc. For lectures not resulting in a publication (but with manuscripts, etc.) see under group V; for congresses attended by Troelstra which did not result in a paper (or a lecture) see also under group D. The order of the publications is chronological. The order within an item is for the archive and the index not always the same. E.g, we give the correspondence apart in the index, but in the archive it may be found between, let say, the manuscripts. In that case the index gives some indication.

    d. Referee reports are confidential. However, there is a lot of referee reports under the following groups: R3, R4, R5, R6 (sometimes there is only correspondence about someone's work). R7. *Studies in Logic* (North-Holland).

The correspondence in the archive is ordered by year and then chronologically, but this is not the ordering in the index. Moreover, the chronological ordering in the archive is not a strict one: sometimes you can find the correspondence for a case (e.g. a certain book) together (only when they are of the same year). The correspondence as in the index has been divided between the correspondence of the most important person, i.e. the chief editor of North-Holland for 'Studies in logic', and other correspondence. In the index there is information by year on:

a. The existence of status reports in 19xy (these you can find in the archive at the beginning of each year); furthermore you can find under point a in the index the names of new editors; for 1972 there is a summing up of all the editors in charge at that moment.

b. The books in focus in 19xy (published, in production, under contract, to be revised or reviewed, invited authors, suggested titles (by the 'intended' authors themselves, but see also under point a, the status reports). They are summed up alphabetically on the authors, sometimes only the name of the book (this is the mode for the index, not for the archive).

c. Correspondence: alphabetically; it has the old structure as under group B.Brieven (scientific correspondence). The name X means 'maybe, there is correspondence between X and Troelstra, and so on (and again: this is the ordering in the index, not of the archive).

d. The correspondence of the chief editor (for the Studies in Logic) of North-Holland: E. Fredriksson (often named Einar), and later on, A. Sevenster (Arjen). The correspondence between Troelstra and the chief editor is always implicit assumed. This correspondence is in the index alphabetically (but not in the archive). The abbrevation 'N-H' means 'North-

Holland'.
